Ultra-rigid construction

The 1.6mm thick chassis base is reinforced with a 3mm thick steel plate under the rigid base to minimize noise from mechanical movement of the optical assembly. The result is a significantly quieter, stiffer and stable chassis structure. This results in reduced vibration for increased performance and better overall operation of player components for more faithful listening.

Dual HDMI output to separate audio and video and enjoy 4K HDR, while using an older generation non-4K compatible home theater soundbar or amplifier. High-efficiency CD-quality S/PDIF and coaxial digital audio output.

Backlite remote control

The info button allows you to consult the detailed technical information of the program, such as audio and video output parameters. The Reavon UBR-X100 can be controlled by leading brands of universal remote controls such as RTI, Crestron, Control4 or Logitech Harmony.

We are extremely happy to see the arrival of this new French brand of premium 4K Ultra HD Blu-Ray players. Since the disappearance of Oppo readers, this kind of models were really lacking in the physical media market. The Reavon UBR-X100 shines with its many qualities and in particular its flawless playback of CD, DTS CD, DVD Audio, DVD, Blu-Ray and 4K Ultra HD Blu-Ray discs with very high quality audio and video reproduction, great quality impressive scaling, full IR and IP control, heavy chassis, impeccable finish and full French and English user manual.

Hi-Fi.ru

The Reavon UBR-X100 generated detailed bright images with impressive dynamic range and wide color gamut. The processing power of the player's processor is sufficient not only for accurate rendering of movement on the screen without smearing or blurring, but also for high-quality scaling from Full HD material to 4K settings. As a result, Blu-ray disc movies are only slightly inferior in picture quality to true 4K Ultra HD material. So definitely the Reavon UBR-X100 is capable of giving your Blu-ray movie library a second life.

WHAT HIFI Sound and Vision

It's been a long time since we've seen a new 4K Blu-ray player. So, to have the Reavon UBR-X100 in for review, which is not only new but from an entirely new home cinema brand, is something of a double win. 'Excited' is only putting it mildly. The Reavon UBR-X100 is one of two launch products from the France-based home cinema company. It's designed as a universal disc player for DVDs, Blu-rays, 4K Blu-rays, 3D Blu-rays and CDs too, but also comes with the mod-cons of USB and network playback for any photos, videos or music files you might have on your NAS or thumb drive.

This is a digital transport, which means dual HDMI outputs, coaxial and optical outputs, an Ethernet port, and two USB ports but no analogue outputs. If you want those you'll have to look elsewhere. The X100 can handle most disc types, such as 4K Ultra HD Blu-ray, 2D and 3D Blu-ray, DVD and CD, although full DVD-Audio support is subject to a firmware update. Playback is flawless, and 4K discs are delivered without any unnecessary processing, while lower resolution content is expertly upscaled to ensure the optimal image.

SOUND & VISION

I am thrilled to see a new pair of higher-end disc players hit the market—way to go, Reavon! While the UX100 and UX200 lack the refinement and customization options of the now-discontinued Oppos, I found their general playback features to be in line with those greatly missed players, and both provided excellent overall video performance. I look forward to the company refining both models via those promised firmware updates, but in the meantime, shiny disc enthusiasts would be hard-pressed to find better playback options than these new offerings.

AVScience

From what I've seen, the X100 offers up some of the absolute best image quality available from players selling today and nicely fills in the void left by Oppo's UDP-203 at its asking price. The overall feature-set and performance offered is very close to the UDP-203, making the X100 a great foundation for any high-performance home theater system.
